

PHASE 0 KICKOFF MEMO · SCAFFOLD

Dabdoub Law Firm Kickoff Memo

Engagement source-of-truth for the Dodonai ↔ Dabdoub Law Firm AI implementation. This memo is the durable reference for the whole engagement. It records each Phase 0 substrate decision made on the Kickoff/Discovery day and the engagement-wide terms that govern every later phase. Where a decision is captured live on the day, this scaffold marks it as a capture field below. Nick finalizes this memo within ~1 week of the on-site session and delivers it as a Phase 0 deliverable.

 Appeals support team: Monday 2026-06-08, 1:00 PM

 Attorneys: Tuesday 2026-06-09, 11:30 AM

Client	Dabdoub Law Firm (operating publicly as Long-Term Disability, longtermdisability.net)
Office	1600 Ponce De Leon Blvd, Suite 1202, Coral Gables, FL 33134
Consultant	Dodonai LLC (Nick Chapleau, Key Personnel)
On-site sessions	Appeals support team: Monday 2026-06-08, 1:00 PM · Attorneys: Tuesday 2026-06-09, 11:30 AM
Memo compiled	2026-06-03 (scaffold) · finalized [FINALIZE DATE]
Governing agreement	Consulting Services Agreement (CSA) between Dodonai LLC and Dabdoub Law Firm, plus its Data Processing Addendum (Exhibit A)
Phase 0 SOW	Kickoff. \$5,000, paid at signing (net 15)
Phase 1A SOW	Wave 1A: Foundation + First-Draft Appeals. \$22,000 (\$11,000 at start, net 15; \$11,000 30 days after go-live on acceptance)

§1 Engagement Overview, Parties, and What's Signed

Who Dabdoub Law Firm is. A 100% claimant-side LTD/STD/ERISA disability litigation boutique founded in 1998 by Edward Dabdoub. The firm runs on a contingency model (a percentage of recovered benefits, no billable hours), so recovered staff and attorney hours convert directly to capacity. The firm's stated goal is to "double caseloads without doubling staff and attorneys."

Relationship. Dabdoub is a pre-existing Dodonai client. A HubSpot CRM + AI buildout ran October 2025 to February 2026. The Dodonai app is in production (Prudential claim-file rule set live since 2026-01-29; Bryn Natland is a daily power user of custom event-extraction tables across 12-document batches). This engagement expands that relationship from the app into a full department-by-department AI implementation, starting with Appeals.

Parties to the engagement.

Party	Who	Role on this engagement
Dodonai LLC	Nick Chapleau, CEO	Sole developer + Key Personnel; on-site at the kickoff of each phase.
Dabdoub Law Firm	Edward "Eddie" P. Dabdoub, Founding Partner	Economic buyer; final signer; cost- and outcome-gated.
	Bryn Natland, JD	Operational lead + champion; signs off on adoption before each phase advances.
	Lansight Technology (firm's IT / MSP)	Holds tenant admin for the firm's M365; provisioned Nick's firm account + Power Automate license (ticket 211080, 2026-06-05); coordinates any remaining Dodonai-Graph app consent + the Egnyte connector by ticket. Rodolfo Barreto / Orlando · support@lansight.com · 305-445-8897.

What is signed.

- **Consulting Services Agreement (CSA).** The master agreement, signed once. Governs ownership, confidentiality, data handling, acceptance, termination, and liability. The CSA controls on any conflict with an SOW (CSA §1.2).
- **Phase 0 Kickoff SOW.** \$5,000, paid at signing, net 15. One day on-site + ~1 week async substrate work.
- **Phase 1A SOW (Wave 1A).** \$22,000. \$11,000 at phase start (net 15); \$11,000 due 30 days after go-live, on acceptance.

§2 Scope Summary

The full scope is itemized in the **Scope Inventory exhibit** (the authoritative line-item list; this memo summarizes, it does not restate it). The headline numbers:

155 WORKFLOWS MAPPED	152 IN BUILD SCOPE	21 ALREADY DELIVERED	131 TO BUILD
----------------------------	-----------------------	----------------------------	-----------------

3 workflows are mapped but outside build scope: I-05 and I-08 (firm-owned Dialpad call-transcript workflows) and X-07 (a firm policy question, already resolved).

Scope Rule

The enumerated Scope Inventory is fixed. A workflow not in the inventory is out of scope by definition. Additions happen only by mutual written agreement, through the retainer backlog or a Change Order priced at the time (CSA §1.5). Locked phase prices hold regardless of any individual workflow's complexity. Extras are new scope.

Phase 1A's six build deliverables and acceptance criteria are detailed in Section 9.

§3

Cross-Phase Substrate Decisions

These are the Phase 0 decisions that govern every downstream phase. Each is locked on the day and recorded here verbatim. The acceptance test for Phase 0 is that this memo records each of these decisions.

3.1 Canonical matter-folder template + AI output destination

Every AI workflow across the engagement writes to the canonical client matter folder under an **"AI output" subfolder**, with matter-identifiable filenames, firing an alert when the output lands. The firm is mid-migration from SharePoint (the S drive) to its **Egnyte** tenant (the migration target switched from Azure to Egnyte on 2026-06-02), so the destination definition must track that migration. Files read/write through whichever system holds the matter folders: SharePoint today (via Graph), Egnyte post-migration (via Egnyte's API). Interim output targets SharePoint until the migration stabilizes.

- **Canonical matter-folder template (the mock folder structure):**

- **CAPTURE ON THE DAY**

- The agreed folder tree, top-level matter folder name convention, subfolders, and the exact "AI output" subfolder path

- **Filename convention (matter-identifiable):**

- **CAPTURE ON THE DAY**

- e.g., {ClientLast}_{MatterID}_{DocType}_{YYYY-MM-DD}.docx

- **SharePoint → Egnyte migration state + cutover trigger:**

- **CAPTURE ON THE DAY**

- Current state, who owns the migration (Lansight), when output should switch its target path, and the interim SharePoint path until then

- **Owner / confirmer:**

 CAPTURE ON THE DAY

Who signs off on the template: Bryn / Kevin / IT

3.2 Inbound-letter taxonomy bones (Phase 1B classifier)

The Phase 1B insurer-letter classifier categorizes inbound mail/fax. The taxonomy bones are agreed now so the later build has a target. Working category set: medical review · approval · denial · OP/overpayment letter · buyout offer · extension · def-change · termination · other.

- **Confirmed category list + any firm-specific splits or merges:**

 CAPTURE ON THE DAY

Confirmed category list + any firm-specific splits or merges

- **Where each category routes (HubSpot property write + workflow trigger):**

 CAPTURE ON THE DAY

Where each category routes (HubSpot property write + workflow trigger)

- **Confidence-scoring + human-review fallback expectation:**

 CAPTURE ON THE DAY

Confidence-scoring + human-review fallback expectation

3.3 Past-rebuttal corpus location

The past-response retrieval index (Phase 1A) is seeded from the firm's historical appeals and rebuttals. The corpus must be located and access-confirmed on the day so the index build is not a Week-1 surprise.

- **Where the corpus lives (path / system / how organized):**

 CAPTURE ON THE DAY

Where the corpus lives (path / system / how organized)

- **Access confirmed for Nick (read access to the corpus):**

 CAPTURE ON THE DAY

Yes/no + how granted

- **Known quality notes (variants, no canonical-version system across the ~894-doc template library):**

 CAPTURE ON THE DAY

Known quality notes (variants, no canonical-version system across the ~894-doc template library)

3.4 The firm-selected seed appeals (5–10)

Five to ten hand-picked exemplar appeals the firm considers model letters, **not** the closest ones by recency. These seed the retrieval index. Captured in the table in Section 4.

3.5 Evaluation-question pattern + attorney handoff signaling

How draft quality is evaluated and how a draft signals it is ready for the attorney.

- **Evaluation-question pattern** (the standard questions an attorney asks of a draft, what counts as "usable"):

📌 CAPTURE ON THE DAY

Evaluation-question pattern (the standard questions an attorney asks of a draft, what counts as "usable")

- **70% quality bar, defined concretely:** the contractual bar is "a usable first draft requiring attorney review/editing, not redrafting from scratch." Capture which sections must be present, which arguments must be attempted, and what counts as usable.

📌 CAPTURE ON THE DAY

70% quality bar defined concretely: which sections must be present, which arguments must be attempted, what counts as usable (see Section 9 for the bar definition and Bryn's 80 to 90% stretch aspiration)

- **Attorney handoff signaling** (how the attorney is alerted a draft is ready, and what they see): the standard is an alert when the draft lands in the "AI output" subfolder, with the A-F rating control and source-document traceability surfaced on the draft.

📌 CAPTURE ON THE DAY

How the alert is delivered, who is alerted per matter, and the on-draft review experience

§4 The Firm-Selected Seed Appeals (5–10)

Hand-picked on the afternoon of the on-site day from the located past-rebuttal corpus (Section 3.3). These seed the Phase 1A retrieval index. The selection criterion is "model letter we would want the system to learn from," not recency. Five is the floor; capture up to ten if the firm wants broader carrier/condition coverage.

#	Matter / client identifier	Carrier	Condition(s)	Why this one is a model letter	Corpus location / file
1	 CAPTURE ON THE DAY Matter / client identifier	 CAPTURE ON THE DAY Carrier	 CAPTURE ON THE DAY Condition(s)	 CAPTURE ON THE DAY Why this one is a model letter	 CAPTURE ON THE DAY Corpus location / file
2	 CAPTURE ON THE DAY Matter / client identifier	 CAPTURE ON THE DAY Carrier	 CAPTURE ON THE DAY Condition(s)	 CAPTURE ON THE DAY Why this one is a model letter	 CAPTURE ON THE DAY Corpus location / file
3	 CAPTURE ON THE DAY Matter / client identifier	 CAPTURE ON THE DAY Carrier	 CAPTURE ON THE DAY Condition(s)	 CAPTURE ON THE DAY Why this one is a model letter	 CAPTURE ON THE DAY Corpus location / file
4	 CAPTURE ON THE DAY Matter / client identifier	 CAPTURE ON THE DAY Carrier	 CAPTURE ON THE DAY Condition(s)	 CAPTURE ON THE DAY Why this one is a model letter	 CAPTURE ON THE DAY Corpus location / file

#	Matter / client identifier	Carrier	Condition(s)	Why this one is a model letter	Corpus location / file
5	 CAPTURE ON THE DAY Matter / client identifier	 CAPTURE ON THE DAY Carrier	 CAPTURE ON THE DAY Condition(s)	 CAPTURE ON THE DAY Why this one is a model letter	 CAPTURE ON THE DAY Corpus location / file
6	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional
7	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional
8	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional
9	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional
10	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional	 CAPTURE ON THE DAY Optional

Selection notes (carrier/condition coverage, gaps to fill in later tuning):

 CAPTURE ON THE DAY

Selection notes: carrier/condition coverage, gaps to fill in later tuning

For reference, the carriers the firm litigates against and the condition templates with mature substrate are listed in Section 11. A-16 drafts carrier-aware and condition-aware, so a spread across carriers and conditions in the seed set is preferable to several of the same.

§5 Microsoft Access / Graph Consent / Egnyte Status

Phase 1A's F-01 Microsoft Graph foundation covers auth + Outlook / Word / Teams operations on the Microsoft surface, plus the matter-folder file connector (SharePoint today via Graph, Egnyte post-migration via Egnyte's API). The firm's MSP, **Lansight Technology**, holds tenant admin and is provisioning access by ticket (211080), so this is no longer a cold in-room consent: base access is already live, and any remaining app consent is coordinated with Lansight.

- **Base access provisioned (firm account `nick@longtermdisability.net`, SharePoint + calendars, Power Automate license):** Yes — Lansight, 2026-06-05.

 CAPTURE ON THE DAY

Confirm login + SharePoint + calendar access verified

- **Dodonai-Graph app consent (any remaining tenant-admin app scopes):**

 CAPTURE ON THE DAY

Coordinated with Lansight via ticket 211080 — status + date

- **Scopes for the Dodonai-Graph app:** request broad up front, narrow later once usage is known.

 CAPTURE ON THE DAY

The granted scopes

- **Power Automate license tier:** free/convenience attached;

 CAPTURE ON THE DAY

Decide: keep free, or Premium only if PA later bridges to Dodonai over HTTP

- **Egnyte connector validated:**

 CAPTURE ON THE DAY

Files migrating SharePoint → Egnyte; connector tested

- **Teams identity for Nick:** the firm account is Nick's Teams identity — done.

Access Gate Note

Base Microsoft access is already provisioned, so F-01 is not gated on the on-site day. If a remaining app consent or the Egnyte connector is delayed, the F-01 milestone date shifts accordingly and the dependency is flagged on the delivery tracker (Section 10).

§6 Data-Handling SOP

This SOP lives inside the Kickoff memo as the durable operating description of how claim files, PHI, and matter data are handled during the engagement. It is the operational companion to the CSA's confidentiality (CSA §5), DPA (Exhibit A), and BAA-where-PHI-is-processed (CSA §4.3) provisions. The CSA controls on any conflict.

What data Dodonai touches. Claim files (often hundreds of pages of medical records, vocational reports, claim forms, correspondence), medical reviews/IME/FCE/CPET reports, denial letters, policies, client PII, and the matter folders that hold them.

Where it stays. Inside the firm's own systems: its Microsoft 365 tenant (mail, calendar, Teams) and its firm-controlled file storage — SharePoint today, migrating to the firm's own Egnyte tenant (the migration target switched from Azure to Egnyte on 2026-06-02). HubSpot holds pipeline metadata only, not file storage. AI workflows read from the matter folder and write `.docx` output back into the matter folder's "AI output" subfolder. Dodonai introduces no storage of its own outside these firm-controlled systems, and does no Dodonai-side logging of firm content beyond the firm's own audit trail. Egnyte is the firm's own contracted platform; where the engagement relies on it as a sub-processor of firm content, that is reflected in the DPA. This sovereignty, everything under the firm's control, is a value Eddie holds explicitly.

Processing purpose. Customer Data is processed solely to deliver the scoped workflows (CSA §3.5, DPA §2). It is not used for advertising, profiling, or any purpose outside the Services, and it is never used to train, fine-tune, or improve any product or model offered to any other client (CSA §3.5, DPA §2.b.iii).

LLM API handling. For the drafting step, claim-file content routes through Microsoft Graph to the LLM provider and returns as a `.docx` in the matter folder. This is pass-through inference: the provider does not train on the firm's data (Anthropic zero-data-retention / enterprise terms; OpenAI API no-training-by-default; Exhibit B). LLM API cost is at-cost, no markup, billed via the firm's own provider key or through Dodonai with a

per-workflow usage breakdown available. Projected ~\$200–\$500/month at the Phase 1A stage.

Access. Limited to Key Personnel (Nick) under the engagement (CSA §1.4). Anyone else handling Customer Data or Confidential Information is bound by obligations no less protective than the CSA (CSA §1.7, §5.4).

Accounting Wall-Off

Fee and disbursement data is walled off by the permission model in HubSpot and in any Dodonai dashboard. Accounting data is not surfaced in Appeals-facing views or in firm-wide dashboards. Maria Calvo's accounting function sits behind that wall.

Human-in-the-Loop

No auto-send. Every AI-drafted document is human-reviewed before it leaves the firm; privilege stays with the attorney. Deadline calendaring is always human-supervised. AI may calendar a date, but a human reads the denial letter and confirms it (the default ERISA appeal deadline is 180 days from receipt of denial, but rare exceptions appear in the letter). Submissions and deadlines are never described as fully automated.

Retention / return-or-destroy. On termination or expiration, or earlier on the firm's written request, Dodonai returns or deletes Customer Data within 30 days, unless retention is required by law, and certifies deletion in writing on request (CSA §4.5, DPA §7). At any exit point the firm keeps everything built and receives a portability package in source form (CSA §3.7).

PHI / BAA. Where the Services involve processing PHI under HIPAA, a BAA is executed as a condition precedent and controls on PHI matters (CSA §4.3).

CAPTURE ON THE DAY

Confirm BAA execution status against the signed CSA package

§7 Engagement-Wide Terms (Recap)

Set by the Phase 0 SOW; binding for the full engagement; incorporated by reference into each later-phase SOW. These are operational commitments; the contract sections that back them are noted.

- **Key Personnel.** Nick Chapleau is named Key Personnel; not reassigned off the engagement without the firm's prior written consent (CSA §1.4).
- **On-site every phase.** Nick is on-site at the kickoff of each phase and through its build (not Wave 1 only), recalibrated by mutual agreement after Phase 1.
- **Microsoft Teams = first-class channel** for both Dodonai↔firm communication and AI workflow alerts. Nick's firm account `nick@longtermdisability.net` (provisioned by Lansight 2026-06-05) is his Teams identity — done.
- **AI output destination.** Every workflow writes to the canonical matter folder (tracking the SharePoint→Egnyte migration) under an "AI output" subfolder, with matter-identifiable filenames and an alert when output lands.
- **Delivery visibility + slip alerts.** A shared delivery tracker with real-time milestone visibility; the firm hears about a slip *before* the date, with cause and proposed trade-offs (CSA §1.9; remedy at §1.10).
- **Source-document traceability.** Every AI-drafted document surfaces the past appeals, rebuttals, and templates retrieved to produce it.
- **Feedback loop.** Each drafting workflow carries an A-F rating plus diff-based learning from the attorney's final edited version.
- **Training + adoption.** Each phase opens with a department-level kickoff explainer + AI-generated summary handouts before formal training; training assets = AI-generated videos + a written runbook per workflow, all firm-owned; a 30-day adoption check-in per phase; Bryn signs off on adoption before the next phase begins.
- **Per-role dashboards** with accounting walled off (see Section 8).
- **Scope = the Scope Inventory** (Section 2); additions only by mutual written agreement (CSA §1.5).
- **Acceptance + final payment.** 30 calendar days from delivery to accept in writing or identify criteria not met; silence = deemed accepted and the phase's remaining 50% becomes due. (The Dabdoub SOWs extend the CSA's base 10-business-day acceptance window to 30 calendar days; see CSA §1.3 as modified by the SOW.) The single exception is the engagement's final payment, which requires affirmative written sign-off and is never deemed accepted by passage of time. Phase 1A is not the final payment, so its 30-day deemed-acceptance backstop applies.
- **Termination.** Each phase is a standalone commitment; on convenience termination the firm owes Fees for completed phases plus the in-flight phase's start payment, and nothing for phases not commenced (CSA §10.3 as applied per the SOW). A Material Schedule Failure remedy (CSA §1.10) lets the firm terminate an in-flight phase for cause if a milestone slips materially for reasons in Dodonai's control and is not cured after notice.

§8

Per-Role Dashboard Definitions

Per-role dashboards are productionized in Phase 5; interim HubSpot alerts are welcome in the meantime, and Bryn may set up her own (e.g., homework not set within 1 week of signing; appeal not submitted ≥ 2 weeks before deadline). The role definitions to carry forward:

Role	Sees	Notes
Eddie (executive)	New clients, appeals in flight, litigation count (high-level, no case specifics)	Concise executive view.
Bryn (case-movement monitor)	Extensions requested; time from intake to appeal submitted; time from complaint to demand; ROI per case (settlement vs. expected)	Operational lead view.
Each assistant	Own case status	Day-to-day work surface.
Each attorney	Assigned cases + pending intakes	Caseload view.
Accounting (Maria)	Walled off	Fee/disbursement data is not visible firm-wide; enforced by the HubSpot permission model and any Dodonai dashboard.

Any role-definition refinements captured on the day:

CAPTURE ON THE DAY

Role-definition refinements captured on the day

§9

Phase 1A Build Deliverables, Quality Bar, and Acceptance

\$5,000

PHASE 0 KICKOFF

\$22,000

PHASE 1A SOW

\$96,000

IMPLEMENTATION TOTAL

Six deliverables (\$22,000), 6 weeks / ~17 dev-days single-developer, two weeks of post-launch tuning included:

1. F-01 Microsoft Graph Foundation

Auth + Outlook / Word / Teams operations on the Microsoft surface, plus the matter-folder file connector (SharePoint today via Graph, Egnyte post-migration via Egnyte's API).

2. Past-Response Retrieval Index

Over the firm's historical appeals/rebuttals, seeded with the 5–10 seed appeals (Section 4), with source-document traceability on every retrieval.

3. Dabdoub-Specific Claim-File Summarizer

Custom extraction (key dates, policy provisions, denial rationale, treating-physician statements, IME conclusions) formatted to feed A-16 directly; triggered when the coordinator marks "Homework Complete" in HubSpot; built on the Dodonai app's bulk-document infrastructure.

4. A-16 AI-Drafted First-Pass Appeal Letters

Pulls the claim-file summary + denial + policy review + retrieved past responses; drops a `.docx` first draft into the matter folder's "AI output" subfolder with an alert when it lands; A-F rating + diff feedback enabled; carrier-aware and condition-aware.

5. A-23 Medical-Review Rebuttal Drafting

The same retrieval-grounded engine retargeted at peer-review / IME / FCE rebuttals, in the firm's voice from its own historical responses.

6. Client Portal

Uploads + case-status tracking on the Dodonai platform.

70% Quality Bar

The contractual bar is "a usable first draft requiring attorney review/editing, not redrafting from scratch." Bryn's own framing: the very first draft will be rough ("probably going to be garbage, we're going to work with it to fix it"), with an eventual stretch aspiration of 80–90% of a full appeal. The concrete definition of what 70% looks like (which sections, which arguments, what counts as usable) is captured in Section 3.5.

Satisfaction Guarantee

If Phase 1A's first AI-drafted appeals do not clear the 70% bar, the firm is under no obligation to continue to Phase 1B. The Kickoff memo and the Phase 1A substrate are the firm's to keep regardless.

Phase 1A Acceptance Criteria

(On representative matters the firm selects:)

- The claim-file summarizer ingests a real claim file and produces the structured summary in the agreed format.
- A-16 produces a `.docx` first-draft appeal landing in the correct matter folder with an alert.
- A-23 produces a first-draft medical-review rebuttal on the same basis.
- Each draft surfaces the retrieved source documents (traceability).
- At the end of the 2-week tuning window, drafts clear the 70% quality bar.
- The A-F rating + diff-feedback capture is live.

§10

Training, Adoption, Roadmap, and Phase Gates

10.1 Training & Adoption Plan

The prior HubSpot build was technically delivered but adoption was rocky. Bryn's diagnosis: "we just threw this thing at them." The department explainer is the explicit, contractual cure. Every automation is framed as work removed from Sonya and the assistants, not a system added. The adoption sequence per phase:

- 1 Department-Level Kickoff Explainer**
AI-generated summary handouts, before any tool lands. "Here's what you do today → here's what we automate → here's what it looks like."
- 2 AI-Generated Training Videos + Written Runbook per Workflow**
All training assets are firm-owned.
- 3 30-Day Adoption Check-In**
Structured follow-up to verify adoption at the department level.
- 4 Bryn Signs Off on Adoption**
Bryn's adoption sign-off before the next phase begins. This is the gate between phases.

For the on-site kickoff specifically, this runs as **two separate sessions**: the **Monday 2026-06-08 (1:00 PM) support-staff session** (Sonya + assistants) is the explainer-and-walkthrough in action; the **Tuesday 2026-06-09 (11:30 AM) attorney session** locks the substrate decisions.

10.2 Roadmap + Phase Gates

Seven phases, each a standalone SOW under the CSA with an explicit pause-point. Pricing and scope are locked across all seven so the firm can plan the year. The firm commits one phase at a time; Bryn's adoption sign-off is the gate between phases.

#	Phase	Cost	Calendar
0	Kickoff	\$5,000	Week 0
1A	Wave 1A: Foundation + First-Draft Appeals	\$22,000	Weeks 1–6
1B	Wave 1B: Appeals Completion + Ingest Substrate	\$10,000	Weeks 7–11
2	On Claims	\$15,000	Weeks 12–16
3	Litigation	\$25,000	Weeks 17–23
4	Accounting	\$5,000	Weeks 24–25
5	Firm Intel + Intake + Marketing	\$14,000	Weeks 26–30

Implementation total **\$96,000** (or **\$88,000** on the partnership track with case-study + co-marketing rights). Ongoing retainer **\$2,500/month** begins at end of Wave 1B. Optional HubSpot admin add-on at **\$200/hour**, hours used. Targeting Thanksgiving 2026 from a June-anchored Kickoff; re-baselined at each phase boundary.

§11 Reference: Carriers + Conditions (for A-16 / A-23 Drafting)

A-16 and A-23 draft carrier-aware and condition-aware. Brief reference (full detail in the firm wiki carrier and condition playbooks):

Carriers the firm litigates against: Hartford, Prudential (rule set live), Lincoln Financial, Cigna/LINA, Unum (largest by volume, surveillance-heavy), Guardian, Aetna, MetLife, New York Life, Reliance Standard, Sun Life, The Standard, Liberty Mutual/Liberty Life, plus smaller-volume carriers.

Universal denial patterns: mental-health 24-month cap; self-reported-symptoms exclusions; pre-existing-condition look-backs; own-occupation → any-occupation transition; peer-review/IME stacking; surveillance overreach.

Conditions with mature template substrate: Long COVID/PASC, ME/CFS, fibromyalgia, migraine/chronic headache, ADD/ADHD, trigeminal/occipital neuralgia, lung cancer, mental-health primary. Recurring RFC argument across fatigue-spectrum conditions: sustainability over a full work week (not point-in-time capacity); CPET (ideally two-day) is the gold-standard objective evidence.

ERISA procedural anchors: appeal window 180 days from receipt of denial (29 CFR 2560.503-1(h)(3)(i)); carrier appeal-decision deadline 45 days, extendable once by 45 to 90 (i)(3)(i); claim-file rights under § 503/505; deemed exhaustion under (I). The firm's [DLF 45 day letter.docx](#) is the deemed-exhaustion enforcement letter.

§12 Open Items + Owners

#	Open Item	Owner	Target	Status
1	On-site dates fixed: support team Mon 2026-06-08 1:00 PM; attorneys Tue 2026-06-09 11:30 AM	Bryn / Nick	Done	☒
2	Confirm morning attendees (Sonya + which named assistants)	Bryn	Before the day	☐
3	Confirm afternoon attendees (Bryn, Kevin; Eddie if available)	Bryn	Before the day	☐
4	Coordinate any remaining Dodonai-Graph app consent + Power Automate license tier with Lansight (ticket 211080)	Lansight / Nick	By ticket	☐
5	Confirm Nick's firm-account login (nick@longtermdisability.net), provisioned by Lansight 2026-06-05)	Nick / Lansight	Before the day	☐
6	Confirm past-rebuttal corpus access so the 5–10 seed appeals can be pulled	Bryn / Kevin	Before / on the day	☐
7	Room + AV: live HubSpot + SharePoint screen-share capability	Firm	Before the day	☐
8	Confirm BAA execution status in the signed CSA package	Nick	At signing	☐
9	Validate the Egnyte connector (files migrating SharePoint → Egnyte)	Nick / Lansight	At kickoff	☐
10	Confirm whether Egnyte needs adding as a sub-processor in the DPA	Nick	At signing	☐

#	Open Item	Owner	Target	Status
11	 CAPTURE ON THE DAY Add items surfaced on the day			[]

Phase 0 acceptance: this memo delivered recording each substrate decision; the 5–10 seed appeals identified; Dodonai-Graph app access confirmed (base access provisioned by Lansight, any remaining consent coordinated via ticket 211080). Finalized by Nick within ~1 week of the on-site sessions.
